OASIcs – OpenAccess Series in Informatics

OASIcs aims at a suitable publication venue to publish peer-reviewed collections of papers emerging from a scientific event. OASIcs volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

## Preface

*Thomas Erlebach and Marco Lübbecke* ........................................... vii

## Invited Paper

Almost 20 Years of Combinatorial Optimization for Railway Planning: from Lagrangian Relaxation to Column Generation

*Alberto Caprara* .................................................................. 1

## Regular Papers

Railway Track Allocation by Rapid Branching

*Ralf Borndörfer, Thomas Schlechte, and Steffen Weider* ......................... 13

Robust Train Routing and Online Re-scheduling

*Alberto Caprara, Laura Galli, Leo Kroon, Gábor Maróti, and Paolo Toth* ........ 24

Heuristics for the Traveling Repairman Problem with Profits

*T. Dewilde, D. Cattrysse, S. Coene, F.C.R. Spieksma, and P. Vansteenwegen* .... 34

Dynamic Graph Generation and Dynamic Rolling Horizon Techniques in Large Scale Train Timetabling

*Frank Fischer and Christoph Helmberg* ............................................ 45

Vertex Disjoint Paths for Dispatching in Railways

*Holger Flier, Matuš Mihalák, Anita Schöbel, Peter Widmayer, and Anna Zych* ... 61

Engineering Time-Dependent Many-to-Many Shortest Paths Computation

*Robert Geisberger and Peter Sanders* ............................................. 74

Fast Detour Computation for Ride Sharing

*Robert Geisberger, Dennis Luxen, Sabine Neubauer, Peter Sanders, and Lars Volker* 88

An Empirical Analysis of Robustness Concepts for Timetabling

*Marc Goerigk and Anita Schöbel* ................................................ 100

Traffic Signal Optimization Using Cyclically Expanded Networks

*Ekkehard Kühler and Martin Strehler* ............................................ 114

Column Generation Heuristic for a Rich Arc Routing Problem

*Sébastien Lannez, Christian Artigues, Jean Damay, and Michel Gendreau* ...... 130

The Team Orienteering Problem: Formulations and Branch-Cut and Price

*Marcus Poggi, Henrique Viana, and Eduardo Uchoa* ............................. 142

The Complexity of Integrating Routing Decisions in Public Transportation Models

*Marcie Schmidt and Anita Schöbel* ............................................. 156
Preface

Transportation networks give rise to very complex and large-scale network optimization problems requiring innovative solution techniques and ideas from mathematical optimization, theoretical computer science, and operations research. Applicable tools and concepts include those from graph and network algorithms, combinatorial optimization, approximation and online algorithms, stochastic and robust optimization. Since 2000, the series of ATMOS workshops brings together researchers and practitioners who are interested in all aspects of algorithmic methods and models for transportation optimization and provides a forum for the exchange and dissemination of new ideas and techniques. The scope of ATMOS comprises all modes of transportation.

The 10th Workshop on Algorithmic Approaches for Transportation Modelling, Optimization, and Systems (ATMOS ’10) was held in connection with ALGO 2010, hosted by University of Liverpool, United Kingdom, on September 9, 2010. Topics of interest for ATMOS ’10 were all optimization problems for passenger and freight transport, including — but not limited to — Infrastructure Planning, Vehicle Scheduling, Crew and Duty Scheduling, Rostering, Routing in Road Networks, Novel Applications of Route Planning Techniques, Demand Forecasting, Design of Tariff Systems, Delay Management, Mobile Applications, Humanitarian Logistics, Simulation Tools, Line Planning, Timetable Generation, and Routing and Platform Assignment. Of particular interest were: the successful integration of several (sub)problems or planning stages, algorithms operating in an online/realtime or stochastic setting, and heuristic approaches (including approximation algorithms) for real-world instances.

In response to the call for papers we received 30 submissions, all of which were reviewed by at least three referees. The submissions were judged on originality, technical quality, and relevance to the topics of the conference. Based on the reviews, the program committee selected the 12 papers which appear in this volume. Together, they quite impressively demonstrate the range of applicability of algorithmic optimization to transportation problems in a wide sense. In addition, Alberto Caprara kindly agreed to complement the program with an invited talk entitled Almost 20 Years of Combinatorial Optimization for Railway Planning: from Lagrangian Relaxation to Column Generation.

We would like to thank all the authors who submitted papers to ATMOS ’10, Alberto Caprara for accepting our invitation to present an invited talk, and the local organizers for hosting the workshop as part of ALGO 2010.

September 2010
