LIPIcs – Leibniz International Proceedings in Informatics

LIPIcs is a series of high-quality conference proceedings across all fields in informatics. LIPIcs volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

Editorial Board
- Susanne Albers (TU München)
- Chris Hankin (Imperial College London)
- Deepak Kapur (University of New Mexico)
- Michael Mitzenmacher (Harvard University)
- Madhavan Mukund (Chennai Mathematical Institute)
- Catuscia Palamidessi (INRIA)
- Wolfgang Thomas (Chair, RWTH Aachen)
- Pascal Weil (CNRS and University Bordeaux)
- Reinhard Wilhelm (Saarland University)

Contents

Preface

Benjamin S. Lerner, Rastislav Bodík, and Shriram Krishnamurthi ................. 0:vii

Everest: Towards a Verified, Drop-in Replacement of HTTPS

Karthikeyan Bhargavan, Barry Bond, Antoine Delignat-Lavaud, Cédric Fournet,
Chris Haublitzel, Cătălin Hrițcu, Samin Ishtiaq, Markulf Kohlweiss, Rustan Leino,
Jay Lorch, Kenji Maillard, Jiaying Pang, Bryan Parno, Jonathan Protzenko,
Tahina Ramananandro, Ashay Rane, Aseem Rastogi, Nikhil Swamy,
Laure Thompson, Peng Wang, Santiago Zanella-Béguelin,
and Jean-Karim Zinzindohoué ................................................... 1:1–1:12

Domain-Specific Symbolic Compilation

Rastislav Bodík, Kartik Chandra, Phitchaya Mangpo Phothilimthana,
and Nathaniel Yazdani ........................................................... 2:1–2:17

The End of History? Using a Proof Assistant to Replace Language Design with
Library Design

Adam Chlipala, Benjamin Delaware, Samuel Duchowni, Jason Gross,
Clément Pit-Claudel, Sorawit Suriyakarn, Peng Wang, and Katherine Ye ....... 3:1–3:15

Natural Language is a Programming Language: Applying Natural Language
Processing to Software Development

Michael D. Ernst ................................................................ 4:1–4:14

Fission: Secure Dynamic Code-Splitting for JavaScript

Arjun Guha, Jean-Baptiste Jeannin, Rachit Nigam, Rian Shambaugh,
and Jane Tangen ................................................................. 5:1–5:13

I Can Parse You: Grammars for Dialogs

Martin Hirzel, Louis Mandel, Avraham Shinnar, Jérôme Siméon,
and Mandana Vaziri ............................................................. 6:1–6:15

Leveraging Sequential Computation for Programming Efficient and Reliable
Distributed Systems

Ivan Kuraj and Armando Solar-Lezama ........................................... 7:1–7:15

Intermittent Computing: Challenges and Opportunities

Brandon Lucia, Vignesh Balaji, Alexei Colin, Kiwan Maeng, and Emily Rappel .. 8:1–8:14

Uncanny Valleys in Declarative Language Design

Mark S. Miller, Daniel von Dincklage, Vuk Ercegovac, and Brian Chin .......... 9:1–9:12

Programming Language Tools and Techniques for 3D Printing

Chandrakana Nandi, Anat Caspi, Dan Grossman, and Zachary Tatlock .......... 10:1–10:12

Toward Semantic Foundations for Program Editors

Cyrus Omar, Ian Voysey, Michael Hilton, Joshua Sunshine, Claire Le Goues,
Jonathan Aldrich, and Matthew A. Hammer ................................... 11:1–11:12

Linking Types for Multi-Language Software: Have Your Cake and Eat It Too

Daniel Patterson and Amal Ahmed .............................................. 12:1–12:15

2nd Summit on Advances in Programming Languages (SNAPL 2017).
Editors: Benjamin S. Lerner, Rastislav Bodík, and Shriram Krishnamurthi
Leibniz International Proceedings in Informatics

Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Dagstuhl Publishing, Germany
Teaching Programming Languages by Experimental and Adversarial Thinking

Let’s Fix OpenGL
  Adrian Sampson ................................................................. 14:1–14:12

Search for Program Structure
  Gabriel Scherer ................................................................. 15:1–15:14

AP: Artificial Programming
  Rishabh Singh and Pushmeet Kohli .............................................. 16:1–16:12

Migratory Typing: Ten Years Later
  Sam Tobin-Hochstadt, Matthias Felleisen, Robert Bruce Findler, Matthew Flatt,
  Ben Greenman, Andrew M. Kent, Vincent St-Amour, T. Stephen Strickland,
  and Asumu Takikawa ............................................................ 17:1–17:17

Taming the Static Analysis Beast
  John Toman and Dan Grossman ................................................... 18:1–18:14

Programming Language Abstractions for Modularly Verified Distributed Systems
  James R. Wilcox, Ilya Sergey, and Zachary Tatlock .............................. 19:1–19:12
This is the second running of the Summit on Advances in Programming Languages (SNAPL), a new venue for the programming languages community. The goal of SNAPL is to complement existing conferences by discussing big-picture questions. After the success of the first SNAPL in 2015, we hope to continue growing the venue into a place where our community comes to enjoy talks with inspiring ideas, fresh insights, and lots of discussion. Open to perspectives from both industry and academia, SNAPL values innovation, experience-based insight, and vision. Not affiliated with any other organization, SNAPL is organized by the PL community for the PL community. We planned to hold SNAPL every two years in early May in Asilomar, California, and this second running is consistent with that plan.

SNAPL has drawn on the elements from many successful meeting formats such as the database community’s CIDR conference, the security community’s NSPW workshop, and others, and continues to evolve its own particular flavor. The focus on SNAPL is not primarily on papers but rather on talks and interaction. Nevertheless, a short paper is the primary medium by which authors request and obtain time to speak. A good SNAPL entry, however, does not have the character of a regular conference submission – we already have plenty of venues for those. Rather, it is closer to the character of an invited talk, encompassing all the diversity that designation suggests: visionary idea, progress report, retrospective, analysis of mistakes, call to action, and more. Thus, a SNAPL submission should be viewed more as a “request to give an invited talk”.

In the process of assembling SNAPL 2017, we also realized that SNAPL serves an additional useful role: serving as a discussion venue for programming languages akin to the role the Snowbird conference plays for computer science chairs and deans. In this spirit, we invited the community to suggest the names of junior researchers in programming languages who would be interesting to invite, and selected a few names from this long and impressive list. We also intend to invite a few senior researchers to address the gathering.

Overall, the submissions suggest SNAPL remains an interesting and valuable venue. Its main weakness was fewer submissions than we expected (28, but of sufficient quality that we were able to accept 18). We have heard three problems with the organization: the submission date was poorly timed (January 6 was too close to or amidst vacation time), there was insufficiently broad publicity, and the chosen date clashes with a few other venues. The first two of these, in particular, seem easy to remedy in the future.

Benjamin S. Lerner, Rastislav Bodík, and Shriram Krishnamurthi
