LIPIcs – Leibniz International Proceedings in Informatics

LIPIcs is a series of high-quality conference proceedings across all fields in informatics. LIPIcs volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

Editorial Board
- Luca Aceto (Chair, Gran Sasso Science Institute and Reykjavik University)
- Susanne Albers (TU München)
- Chris Hankin (Imperial College London)
- Deepak Kapur (University of New Mexico)
- Michael Mitzenmacher (Harvard University)
- Madhavan Mukund (Chennai Mathematical Institute)
- Anca Muscholl (University Bordeaux)
- Catuscia Palamidessi (INRIA)
- Raimund Seidel (Saarland University and Schloss Dagstuhl – Leibniz-Zentrum für Informatik)
- Thomas Schwentick (TU Dortmund)
- Reinhard Wilhelm (Saarland University)

ISSN 1868-8969

Dedicated to the memory of Philippe Flajolet.
Contents

Preface
James Allen Fill and Mark Daniel Ward .................................................. 0:xi

Program Committee .................................................................................. 0:xiii

Flajolet Lecture .......................................................................................... 0:xv

Steering Committee .................................................................................... 0:xvii

Organization and Funding .......................................................................... 0:xix

Flajolet Award Lecture

OMG: GW, CLT, CRT and CFTP
Luc Devroye .................................................................................................. 1:1–1:1

Keynote Speakers

Assumptionless Bounds for Random Trees
Louigi Addario-Berry .................................................................................. 2:1–2:1

Making Squares – Sieves, Smooth Numbers, Cores and Random Xorsat
Béla Bollobás ............................................................................................... 3:1–3:1

Bootstrap Percolation and Galton–Watson Trees
Karen Gunderson .......................................................................................... 4:1–4:1

Thinking in Advance About the Last Algorithm We Ever Need to Invent
Olle Häggström ............................................................................................ 5:1–5:12

Patterns in Random Permutations Avoiding Some Other Patterns
Svante Janson ................................................................................................. 6:1–6:12

Vanishing of Cohomology Groups of Random Simplicial Complexes
Oliver Cooley, Nicola Del Giudice, Mihyun Kang, and Philipp Sprüssel ........ 7:1–7:14

Periods in Subtraction Games
Bret Benesh, Jamylyle Carter, Deidra A. Coleman, Douglas G. Crabill, Jack H. Good, Michael A. Smith, Jennifer Travis, and Mark Daniel Ward .......... 8:1–8:3

Editors: James Allen Fill and Mark Daniel Ward
Leibniz International Proceedings in Informatics
Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Dagstuhl Publishing, Germany
Regular Papers

Permutations in Binary Trees and Split Trees
Michael Albert, Cecilia Holmgren, Tony Johansson, and Fiona Skerman ... 9:1–9:12

Analytic Combinatorics of Lattice Paths with Forbidden Patterns: Asymptotic
Aspects and Borges’s Theorem
Andrei Asinowski, Axel Bacher, Cyril Banderier, and Bernhard Gittenberger ... 10:1–10:14

Periodic Pólya Urns and an Application to Young Tableaux
Cyril Banderier, Philippe Marchal, and Michael Wallner ... 11:1–11:13

Diagonal Asymptotics for Symmetric Rational Functions via ACSV
Yuliy Baryshnikov, Stephen Melczer, Robin Pemantle, and Armin Straub ... 12:1–12:15

Asymptotic Distribution of Parameters in Random Maps
Olivier Bodini, Julien Courtiel, Sergey Dovgal, and Hsien-Kuei Huang ... 13:1–13:12

Beyond Series-Parallel Concurrent Systems: The Case of Arch Processes
Olivier Bodini, Matthieu Dien, Antoine Genitrini, and Alfredo Viola ... 14:1–14:14

Inversions in Split Trees and Conditional Galton–Watson Trees
Xing Shi Cai, Cecilia Holmgren, Svante Janson, Tony Johansson, and
Fiona Skerman ... 15:1–15:12

The Cover Time of a Biased Random Walk on a Random Cubic Graph
Colin Cooper, Alan Frieze, and Tony Johansson ... 16:1–16:12

The Genus of the Erdős-Rényi Random Graph and the Fragile Genus Property
Chris Dowden, Mihyun Kang, and Michael Krivelevich ... 17:1–17:13

Maximal Independent Sets and Maximal Matchings in Series-Parallel and
Related Graph Classes
Michael Drmota, Lander Ramos, Clément Requilé, and Juanjo Rué ... 18:1–18:15

The Number of Double Triangles in Random Planar Maps
Michael Drmota and Guan-Ru Yu ... 19:1–19:18

Fixed Partial Match Queries in Quadtrees
Amalia Duch, Gustavo Lau, and Conrado Martínez ... 20:1–20:18

On the Tails of the Limiting QuickSort Density
James Allen Fill and Wei-Chun Hung ... 21:1–21:10

Stationary Distribution Analysis of a Queueing Model with Local Choice
Plinio S. Dester, Christine Fricker, and Hanene Mohamed ... 22:1–22:18

Refined Asymptotics for the Number of Leaves of Random Point Quadtreese
Michael Fuchs, Noela S. Müller, and Henning Sulzbach ... 23:1–23:16

Slow Convergence of Ising and Spin Glass Models with Well-Separated Frustrated
Vertices
David Gillman and Dana Randall ... 24:1–24:17

On the Number of Variables in Special Classes of Random Lambda-Terms
Bernhard Gittenberger and Isabella Larcher ... 25:1–25:14
Counting Ascents in Generalized Dyck Paths
  *Benjamin Hackl, Clemens Heuberger, and Helmut Prodinger* ..................... 26:1–26:15

Analysis of Summatory Functions of Regular Sequences: Transducer and Pascal’s Rhombus
  *Clemens Heuberger, Daniel Krenn, and Helmut Prodinger* ....................... 27:1–27:18

Distribution of the Number of Corners in Tree-like and Permutation Tableaux
  *Paweł Hitczenko and Aleksandr Yaroslavskiy* .................................. 28:1–28:13

Asymptotic Expansions for Sub-Critical Lagrangean Forms
  *Hsien-Kuei Hwang, Mihyun Kang, and Guan-Huei Duh* ........................... 29:1–29:13

Periods of Iterations of Mappings over Finite Fields with Restricted Preimage Sizes
  *Rodrigo S. V. Martins, Daniel Panario, Claudio Qureshi, and Eric Schmutz* ...... 30:1–30:11

Modularity of Erdős-Rényi Random Graphs
  *Colin McDiarmid and Fiona Skerman* ........................................... 31:1–31:13

Counting Planar Tanglegrams
  *Dimbinaina Ralaivaosaona, Jean Bernoulli Ravelomanana, and Stephan Wagner* . 32:1–32:18

Asymptotic Normality of Almost Local Functionals in Conditioned Galton-Watson Trees
  *Dimbinaina Ralaivaosaona, Matas Šileikis, and Stephan Wagner* ............... 33:1–33:17

Local Limits of Large Galton–Watson Trees Rerooted at a Random Vertex
  *Benedikt Stufler* ............................................................................. 34:1–34:11

The Depoissonisation Quintet: Rice–Poisson–Mellin–Newton–Laplace
  *Brigitte Vallée* ................................................................................ 35:1–35:20

Average Cost of QuickXsort with Pivot Sampling
  *Sebastian Wild* .............................................................................. 36:1–36:19
Preface

Analysis of algorithms is a scientific basis for computation, providing a link between abstract algorithms and the performance characteristics of their implementations in the real world. The general effort to predict precisely the performance of algorithms has come to involve research in analytic combinatorics, the analysis of random discrete structures, asymptotic analysis, exact and limiting distributions, and other fields of inquiry in computer science, probability theory, and enumerative combinatorics. See http://aofa.cs.purdue.edu/.

The Call for Papers invited papers in
- analytic algorithmics and combinatorics,
- probabilistic analysis of algorithms,
- randomized algorithms.

We also welcomed papers addressing problems such as: combinatorial algorithms, string searching and pattern matching, sublinear algorithms on massive data sets, network algorithms, graph algorithms, caching and memory hierarchies, indexing, data mining, data compression, coding and information theory, and computational finance. Papers were also welcomed that address bridges to research in related fields such as statistical physics, computational biology, computational geometry, and simulation.

Authors of selected accepted extended abstracts will be invited to submit full papers for peer review to a special issue (published circa late 2019) of Algorithmica.

—James Allen (“Jim”) Fill and Mark Daniel Ward,
on behalf of the Program and Steering Committees
The Philippe Flajolet Lecture Prize for outstanding contributions to analytic combinatorics and analysis of algorithms is awarded every two years by the Analysis of Algorithms (AofA) community—a community that owes its existence to Philippe Flajolet. The first Flajolet Lecture was presented by Donald E. Knuth at the 25th International Conference on Probabilistic, Combinatorial and Asymptotic Methods for the Analysis of Algorithms in 2014 in Paris, France, and the second one by Robert Sedgewick at the 27th AofA Conference in 2016 in Krakow, Poland.

At this year's conference, Luc Devroye presented the third Flajolet Lecture, entitled “OMG: GW, CLT, CRT and CFTP.”

The prize is named in honor and recognition of the extraordinary accomplishments of the late Philippe Flajolet, who spent most of his scientific life at INRIA, France. Philippe is best known for fundamental advances in mathematical methods for the analysis of algorithms. His research laid the foundation of a subfield of mathematics now known as analytic combinatorics. Analytic combinatorics is a modern basis for the quantitative study of combinatorial structures (such as words, trees, mappings, and graphs), with applications to probabilistic study of algorithms that are based on these structures. It also strongly influences research in other scientific domains, such as statistical physics, computational biology, and information theory. Flajolet’s work takes the field forward by introducing original approaches in combinatorics based on two types of methods: symbolic and analytic. The symbolic side is based on the automation of decision procedures in combinatorial enumeration to derive characterizations of generating functions. The analytic side treats those functions as functions in the complex plane and leads to precise characterization of limit distributions. Beyond these foundational contributions, Philippe’s research opened new avenues in various domains of applied computer science, including streaming algorithms, communication protocols, database access methods, data mining, symbolic manipulation, text-processing algorithms, and random generation.
Program Committee

- **Chair:** James Allen Fill, Johns Hopkins University, USA
- Olivier Bodini, Université Paris 13, France
- Michael Drmota, Technische Universität Vienna, Austria
- Antoine Genitrini, Université Paris 6, France
- Zbigniew Gołębiewski, Wrocław University of Science and Technology, Poland
- Cecilia Holmgren, Uppsala University, Sweden
- Hsien-Kuei Hwang, Academic Sinica, Taiwan
- Svante Linusson, KTH Royal Institute of Technology, Sweden
- Manuel Lladser, University of Colorado Boulder, USA
- Cécille Mailler, University of Bath, United Kingdom
- Markus Nebel, Bielefeld University, Germany
- Ralph Neininger, Goethe University Frankfurt, Germany
- Daniel Panario, Carleton University, Canada
- Bruno Salvy, INRIA Lyon, France
- Robert Sedgewick, Princeton University, USA
- Wojciech Szpankowski, Purdue University, USA
- Stephan Wagner, Stellenbosch University, South Africa
- Mark Daniel Ward, Purdue University, USA
Steering Committee

- **Chair**: Robert Sedgewick, Princeton University, USA
- Nicolas Broutin, INRIA Rocquencourt, France
- Hsien-Kuei Hwang, Academia Sinica, Taiwan
- Conrado Martínez, Polytechnic University of Catalonia, Spain
- Ralph Neininger, Goethe-U Frankfurt, Germany
- Michèle Soria, Université Paris 6, France
Organization and Funding

Local organization of the conference was coordinated by Cecilia Holmgren (Uppsala University, Sweden) and Sofie White (Uppsala, Sweden), in coordination with Program Committee Chair Jim Fill (Johns Hopkins University, USA). The conference location was the Campus Blåsenhus of Uppsala University.

Generous funding for the conference was provided by the Marcus Wallenberg Foundation for International Scientific Collaboration and by the Swedish Research Council.
