Preface

The 2nd Workshop on Formal Methods for Blockchains (FMBC) took place virtually on July 20/21 2020 as part of CAV 2020, the 32nd International Conference on Computer-Aided Verification. Its purpose was to be a forum to identify theoretical and practical approaches applying formal methods to blockchain technology.

This second edition of FMBC attracted 18 submissions (10 long papers, 4 short papers, and 4 extended abstracts) on topics such as verification of smart contracts or analysis of consensus protocols. Each paper was reviewed by at least three program committee members or appointed external reviewers. This led to a selection of 10 papers (7 long and 3 short) that will be presented at the workshop as regular talks, as well as 1 long paper and 4 extended abstracts that will be presented as lightning talks. Additionally, we were very pleased to have an invited keynote by Grigore Rosu (University of Illinois at Urbana-Champaign).

This volume contains the papers selected for regular talks, the extended abstracts and paper selected for lightning talks as well as the abstract of the invited talk. Before inclusion, the papers were reviewed a second time after the workshop by the program committee.

We thank all the authors that submitted a paper, as well as the program committee members and external reviewers for their immense work. We are grateful to Shuvendu Lahiri and Chao Wang, Program Chairs of CAV 2020, and to Zvonimir Rakamaric, Workshop Chair of CAV 2020, for their support and guidance. Finally, we would like to express our gratitude to our sponsor Nomadic Labs for its generous support.
