12th Workshop on Parallel Programming and Run-Time Management Techniques for Many-core Architectures

10th Workshop on Design Tools and Architectures for Multicore Embedded Computing Platforms

PARMA-DITAM 2021, January 19, 2021, Budapest, Hungary

Edited by
João Bispo
Stefano Cherubin
José Flich
OASics is a series of high-quality conference proceedings across all fields in informatics. OASics volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

Editorial Board

- Daniel Cremers (TU München, Germany)
- Barbara Hammer (Universität Bielefeld, Germany)
- Marc Langheinrich (Università della Svizzera Italiana – Lugano, Switzerland)
- Dorothea Wagner (Editor-in-Chief, Karlsruher Institut für Technologie, Germany)

ISSN 1868-8969

In a moment of exceptional changes,
We remember all the people we lost.
   May they inspire us to look ahead
To the new opportunities we found.
Contents

Preface

João Bispo, Stefano Cherubin, and José Flich ........................................... 0.ix

Regular Papers

Towards Adaptive Multi-Alternative Process Network

Hasna Bouraoui, Chadlia Jerad, and Jeronimo Castrillon ........................... 1:1–1:11

BifurKTM: Approximately Consistent Distributed Transactional Memory for GPUs

Samuel Irving, Lu Peng, Costas Busch, and Jih-Kwon Peir ......................... 2:1–2:15

The Impact of Precision Tuning on Embedded Systems Performance: A Case Study on Field-Oriented Control

Gabriele Magnani, Daniele Cattaneo, Michele Chiari, and Giovanni Agosta ...... 3:1–3:13

Resource Aware GPU Scheduling in Kubernetes Infrastructure

Aggelos Ferikoglou, Dimosthenis Masouras, Achilleas Tzenopoulos, Sotirios Xydis, and Dimitrios Soudris ........................................... 4:1–4:12

Invited Paper

HPC Application Cloudification: The StreamFlow Toolkit

Iacopo Colonnelli, Barbara Cantalupo, Roberto Esposito, Matteo Pennisi, Concetto Spampinato, and Marco Aldinucci ........................................... 5:1–5:13
This volume collects the papers presented at the 12th Workshop on Parallel Programming and Run-Time Management Techniques for Many-core Architectures, and the 10th Workshop on Design Tools and Architectures for Multicore Embedded Computing Platforms (PARMA-DITAM 2021). The workshop is co-located with the 2021 edition of the HiPEAC conference and was held on January 19, 2021. Although the workshop was originally planned to take place at Budapest, Hungary, due to the COVID-19 pandemic it switched to a virtual online event.

The current trend towards many-core and the emerging accelerator-based architecture requires a global rethinking of software and hardware design. The PARMA-DITAM workshop focuses on many-core architectures, parallel programming models, design space exploration, tools and run-time management techniques to exploit the features of such (heterogeneous) many-core processor architectures from embedded to high performance computing platforms.

The scope of the PARMA-DITAM workshop include the following topics:

- Parallel programming models and languages, compilers and virtualization techniques
- Runtime adaptivity, runtime management, power management and memory management
- Heterogeneous and reconfigurable many-core architectures and design space exploration
- Design tools and methodologies for many-core architectures
- Parallel applications for many-core platforms
- Architectures and compiler techniques to accelerate deep neural networks
