## ■ Foreword

The Symposium on Theoretical Aspects of Computer Science (STACS) is held alternately in France and in Germany. The conference of March 10-12, 2011, held in Dortmund, is the 28th in this series. Previous meetings took place in Paris (1984), Saarbrücken (1985), Orsay (1986), Passau (1987), Bordeaux (1988), Paderborn (1989), Rouen (1990), Hamburg (1991), Cachan (1992), Würzburg (1993), Caen (1994), München (1995), Grenoble (1996), Lübeck (1997), Paris (1998), Trier (1999), Lille (2000), Dresden (2001), Antibes (2002), Berlin (2003), Montpellier (2004), Stuttgart (2005), Marseille (2006), Aachen (2007), Bordeaux (2008), Freiburg (2009), and Nancy (2010).

The interest in STACS has remained at a high level over the past years. The STACS 2011 call for papers led to 271 submissions from 45 countries. Each paper was assigned to three program committee members. The committee selected 54 papers during a two-week electronic meeting held in November. As co-chairs of the program committee, we would like to sincerely thank its members and the many external referees for their valuable work. In particular, there were intense and interesting discussions. The overall very high quality of the submissions made the selection a difficult task.

We would like to express our thanks to the three invited speakers, Susanne Albers, Véronique Cortier, and Georg Gottlob. Special thanks go to Andrei Voronkov for his EasyChair software ([www.easychair.org](http://www.easychair.org)). Moreover, we would like to warmly thank Matthias Niewerth for preparing the conference proceedings.

For the fourth time, this year's STACS proceedings are published in electronic form. A printed version was also available at the conference, by request. The electronic proceedings are available through several portals, and in particular through LIPIcs and HAL series. The proceedings of the Symposium, which are published electronically in the LIPIcs (Leibniz International Proceedings in Informatics) series, are available through Dagstuhl's website. The LIPIcs series provides an ISBN for the proceedings volume and manages the indexing issues. HAL is an electronic repository managed by several French research agencies. Both, HAL and LIPIcs, guarantee perennial, free and easy electronic access, while the authors will retain the rights over their work. The rights on the articles in the proceedings are kept with the authors and the papers are available freely, under a Creative Commons license (see [www.stacs-conf.org/faq.html](http://www.stacs-conf.org/faq.html) for more details).

STACS 2011 received funds from Deutsche Forschungsgemeinschaft (DFG) and from TU Dortmund. We thank them for their support!

## Session 7B: Logic

Unary negation <i>Balder ten Cate and Luc Segoufin</i> .....	344
First-order Fragments with Successor over Infinite Words <i>Jakub Kallas, Manfred Kufleitner, and Alexander Lauser</i> .....	356
The model checking problem for propositional intuitionistic logic with one variable is AC <sup>1</sup> -complete <i>Martin Mundhenk and Felix Weiß</i> .....	368

## Session 8A: Scheduling 1

A Fast Algorithm for Multi-Machine Scheduling Problems with Jobs of Equal Processing Times <i>Alejandro López-Ortiz and Claude-Guy Quimper</i> .....	380
Scheduling for Weighted Flow Time and Energy with Rejection Penalty <i>Sze-Hang Chan, Tak-Wah Lam, and Lap-Kei Lee</i> .....	392

## Session 8B: Graph Decomposition

Clique-width: When Hard Does Not Mean Impossible <i>Robert Ganian, Petr Hliněný, and Jan Obdržálek</i> .....	404
From Pathwidth to Connected Pathwidth <i>Dariusz Dereniowski</i> .....	416

**Session 9A: Streaming**

Polynomial Fitting of Data Streams with Applications to Codeword Testing <i>Andrew McGregor, Atri Rudra, and Steve Uurtamo</i> .....	428
Spectral Sparsification in the Semi-Streaming Setting <i>Jonathan A. Kelner and Alex Levin</i> .....	440

**Session 9B: Recursion Theory**

Solovay functions and K-triviality <i>Laurent Bienvenu, Wolfgang Merkle, and André Nies</i> .....	452
Everywhere complex sequences and the probabilistic method <i>Andrey Yu. Rumyantsev</i> .....	464

**Session 10A: Scheduling 2**

Online Scheduling with Interval Conflicts <i>Magnús M. Halldórsson, Boaz Patt-Shamir, and Dror Rawitz</i> .....	472
Analysis of multi-stage open shop processing systems <i>Christian E.J. Eggermont, Alexander Schrijver, and Gerhard J. Woeginger</i> .....	484

**Session 10B: Regular Expressions**

Graphs Encoded by Regular Expressions <i>Stefan Gulan</i> .....	495
Extended Regular Expressions: Succinctness and Decidability <i>Dominik D. Freydenberger</i> .....	507

**Session 11A: Graph Algorithms**

New Exact and Approximation Algorithms for the Star Packing Problem in Undirected Graphs <i>Maxim Babenko and Alexey Gusakov</i> .....	519
Balanced Interval Coloring <i>Antonios Antoniadis, Falk Hüffner, Pascal Lenzner, Carsten Moldenhauer, and Alexander Souza</i> .....	531

**Session 11B: Algebra & Complexity**

Symmetric Determinantal Representation of Weakly-Skew Circuits <i>Bruno Grenet, Erich L. Kaltofen, Pascal Koiran, and Natacha Portier</i> .....	543
Randomness Efficient Testing of Sparse Black Box Identities of Unbounded Degree over the Reals <i>Markus Bläser and Christian Engels</i> .....	555

**Session 13A: Complexity of Graph & Group Problems**

On Isomorphism Testing of Groups with Normal Hall Subgroups <i>Youming Qiao, Jayalal Sarma M.N., and Bangsheng Tang</i>	567
Space Complexity of Perfect Matching in Bounded Genus Bipartite Graphs <i>Samir Datta, Raghav Kulkarni, Raghunath Tewari, and N. V. Vinodchandran</i>	579
The Recognition of Triangle Graphs <i>George B. Mertzios</i>	591

**Session 13B: Verification**

Collapse Operation Increases Expressive Power of Deterministic Higher Order Pushdown Automata <i>Paweł Parys</i>	603
Temporal Synthesis for Bounded Systems and Environments <i>Orna Kupferman, Yoad Lustig, Moshe Y. Vardi, and Mihalis Yannakakis</i>	615
Linear temporal logic for regular cost functions <i>Denis Kuperberg</i>	627

**Session 14A: Geometry and Complexity**

Bounds on the maximum multiplicity of some common geometric graphs <i>Adrian Dumitrescu, André Schulz, Adam Sheffer, and Csaba D. Tóth</i>	637
On the computational complexity of Ham-Sandwich cuts, Helly sets, and related problems <i>Christian Knauer, Hans Raj Tiwary, and Daniel Werner</i>	649

**Session 14B: Query Complexity**

Quantum query complexity of minor-closed graph properties <i>Andrew M. Childs and Robin Kothari</i>	661
Three Query Locally Decodable Codes with Higher Correctness Require Exponential Length <i>Anna Gál and Andrew Mills</i>	673
