LIPICs – Leibniz International Proceedings in Informatics

LIPICs is a series of high-quality conference proceedings across all fields in informatics. LIPICs volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

Editorial Board

- Susanne Albers (Humboldt University Berlin)
- Chris Hankin (Imperial College London)
- Deepak Kapur (University of New Mexico)
- Michael Mitzenmacher (Harvard University)
- Madhavan Mukund (Chennai Mathematical Institute)
- Wolfgang Thomas (RWTH Aachen)
- Vinay V. (Chennai Mathematical Institute)
- Pascal Weil (*Chair*, University Bordeaux)
- Reinhard Wilhelm (Saarland University, Schloss Dagstuhl)

■ Contents

Preface	
<i>John P. Gallagher and Michael Gelfond</i>	i

Technical Papers

Multi-Criteria Optimization in Answer Set Programming	
<i>Martin Gebser, Roland Kaminski, Benjamin Kaufmann, and Torsten Schaub</i>	1
Yet Another Characterization of Strong Equivalence	
<i>Alexander Bochman and Vladimir Lifschitz</i>	11
Evolution of Ontologies using ASP	
<i>Max Ostrowski, Giorgos Flouris, Torsten Schaub, and Grigoris Antoniou</i>	16
Modelling GRAMMAR Constraints with Answer Set Programming	
<i>Christian Drescher and Toby Walsh</i>	28
Hybrid ASP	
<i>Alex Brik and Jeffrey B. Remmel</i>	40
Representing the Language of the Causal Calculator in Answer Set Programming	
<i>Michael Casolary and Joohyung Lee</i>	51
Static Type Checking for the Q Functional Language in Prolog	
<i>Zsolt Zombori, János Csorba, and Péter Szeredi</i>	62
Canonical Regular Types	
<i>Ethan K. Jackson, Nikolaj Bjørner, and Wolfram Schulte</i>	73
Compiling Prolog to Idiomatic Java	
<i>Michael Eichberg</i>	84
Synthesis of Logic Programs from Object-Oriented Formal Specifications	
<i>Ángel Herranz and Julio Mariño</i>	95
An Inductive Approach for Modal Transition System Refinement	
<i>Dalal Alrajeh, Jeff Kramer, Alessandra Russo, and Sebastian Uchitel</i>	106
Constraints in Non-Boolean Contexts	
<i>Leslie De Koninck, Sebastian Brand, and Peter J. Stuckey</i>	117
Minimizing the overheads of dependent AND-parallelism	
<i>Peter Wang and Zoltan Somogyi</i>	128
Smart test data generators via logic programming	
<i>Lukas Bulwahn</i>	139
Declarative Output by Ordering Text Pieces	
<i>Stefan Brass</i>	151

Technical Communications of the 27th International Conference on Logic Programming (ICLP'11).

Editors: John P. Gallagher and Michael Gelfond

Leibniz International Proceedings in Informatics

Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Dagstuhl Publishing, Germany

Transaction Logic with Defaults and Argumentation Theories <i>Paul Fodor and Michael Kifer</i>	162
Multi-agent Confidential Abductive Reasoning <i>Jiefei Ma, Alessandra Russo, Krysia Broda, and Emil Lupu</i>	175
BAAC: A Prolog System for Action Description and Agents Coordination <i>Agostino Dovier, Andrea Formisano, and Enrico Pontelli</i>	187
Declarative Processing of Semistructured Web Data <i>Michael Hanus</i>	198
CDAOStore: A Phylogenetic Repository Using Logic Programming and Web Services <i>Brandon Chisham, Enrico Pontelli, Tran Cao Son, and Ben Wright</i>	209
Bayesian Annotation Networks for Complex Sequence Analysis <i>Henning Christiansen, Christian Theil Have, Ole Torp Lassen and Matthieu Petit</i>	220
Improving the Outcome of a Probabilistic Logic Music System Generator by Using Perlin Noise <i>Colin J. Nicholson, Danny De Schreye, and Jon Sneyers</i>	231
Abduction in Annotated Probabilistic Temporal Logic <i>Cristian Molinaro, Amy Sliva, and V. S. Subrahmanian</i>	240
 Doctoral Consortium	
Automatic Parallelism in Mercury <i>Paul Bone</i>	251
Consistency Techniques for Hybrid Simulations. <i>Marco Bottalico</i>	255
Extensions of Answer Set Programming <i>Alex Brik</i>	261
A Semiring-based framework for fair resources allocation <i>Paola Campi</i>	268
Promoting Modular Nonmonotonic Logic Programs <i>Thomas Krennwallner</i>	274
Correct Reasoning about Logic Programs <i>Jael Kriener</i>	280
Accepting the natural order of rules in a logic program with preferences <i>Alexander Šimko</i>	284
Implementation of Axiomatic Language <i>Walter W. Wilson</i>	290
Two Phase Description Logic Reasoning for Efficient Information Retrieval <i>Zsolt Zombori</i>	296

■ Preface

Following the initiative in 2010 taken by the Association for Logic Programming and Cambridge University Press, the full papers accepted for the International Conference on Logic Programming again appear as a special issue of Theory and Practice of Logic Programming (TPLP) and shorter papers appear in Leibniz International Proceedings in Informatics (LIPIcs) series, published on line through the Dagstuhl Research Online Publication Server (DROPS). Both sets of papers were presented by their authors at the 27th ICLP. Together, the journal special issue and the volume of short technical communications constitute the *proceedings* of ICLP.

Papers describing original, previously unpublished research and not simultaneously submitted for publication elsewhere were solicited in all areas of logic programming including but not restricted to: *Theory* (Semantic Foundations, Formalisms, Non-monotonic Reasoning, Knowledge Representation), *Implementation* (Compilation, Memory Management, Virtual Machines, Parallelism), *Environments* (Program Analysis, Transformation, Validation, Verification, Debugging, Profiling, Testing), *Language Issues* (Concurrency, Objects, Coordination, Mobility, Higher Order, Types, Modes, Assertions, Programming Techniques), *Related Paradigms* (Abductive Logic Programming, Inductive Logic Programming, Constraint Logic Programming, Answer-Set Programming), and *Applications* (Databases, Data Integration and Federation, Software Engineering, Natural Language Processing, Web and Semantic Web, Agents, Artificial Intelligence, Bioinformatics).

There were four broad categories for submissions: (1) technical papers for describing technically sound, innovative ideas that can advance the state of the art of logic programming; (2) application papers, where the emphasis is on their impact on the application domain; (3) system and tool papers, where the emphasis is on the novelty, practicality, usability and general availability of the systems and tools described; and (4) technical communications, aimed at describing recent developments, new projects, and other materials that are not ready for main publication as standard papers. The length limit for full papers was set at 15 pages plus bibliography for full papers (approximately in line with the length of TPLP technical notes) and for technical communications at 10 pages total.

In response to the call for papers we received 67 submissions. Of those, 64 were full papers submitted to the TPLP special issue track (21 of them applications or systems papers). The program chairs acting as guest editors organized the refereeing process with the help of the program committee and numerous external reviewers.¹ Each paper was reviewed by at least three anonymous referees who provided full written evaluations. After the first round of refereeing 43 full papers remained. Of these, 23 went through a full second round of refereeing with written referee reports. Finally, all 43 papers went through a final, copy-editing round. In the end the special issue contains 19 technical papers, 3 application papers, and 1 systems and tools paper. During the first phase of reviewing the papers submitted to the technical communications track were also reviewed by at least three anonymous referees providing full written evaluations. Also, a number of full paper submissions were moved during the reviewing process to the technical communications track. Finally, 23 papers were accepted as technical communications and are published in this volume. The list of the 23 accepted full papers appearing in the TPLP special issue follows:

Regular Papers

Complex Optimization in Answer Set Programming

Martin Gebser, Roland Kaminski and Torsten Schaub

On the Correctness of Pull-Tabbing

Sergio Antoy

(Co-)Inductive Semantics for Constraint Handling Rules

Rémy Haemmerlé

The Magic of Logical Inference in Probabilistic Programming

*Bernd Gutmann, Ingo Thon, Angelika Kimmig, Maurice Bruynooghe and
Luc De Raedt*

RedAlert: Determinacy Inference for Prolog

Jael Kriener and Andy King

On Combining Linear-Based Strategies for Tabled Evaluation of Logic Programs

Ricardo Rocha and Miguel Areias

Estimating the overlap between dependent computations for automatic parallelization

Paul Bone, Zoltan Somogyi and Peter Schachte

Transition Systems for Model Generators — A Unifying Approach

Yuliya Lierler and Mirosław Truszczyński

Efficient Instance Retrieval of Subgoals for Subsumptive Tabled Evaluation of Logic Programs

Flavio Cruz and Ricardo Rocha

Non-termination Analysis of Logic Programs with integer arithmetics

Dean Voets and Daniel De Schreye

A Structured Alternative to Prolog with Simple Compositional Semantics

António Porto

The PITA System: Tabling and Answer Subsumption for Reasoning under Uncertainty

Fabrizio Riguzzi and Terrance Swift

Normative Design using Inductive Learning

Domenico Corapi, Alessandra Russo, Marina De Vos, Julian Padget and Ken Satoh

Abstract Diagnosis of Timed Concurrent Constraint programs

Marco Comini, Laura Titolo and Alicia Villanueva

Parallel Backtracking with Answer Memoing for Independent And-Parallelism

Pablo Chico De Guzmán, Amadeo Casas, Manuel Carro and Manuel Hermenegildo

SAT-Based Termination Analysis Using Monotonicity Constraints over the Integers

*Amir M. Ben-Amram, Michael Codish, Carsten Fuhs, Jürgen Giesl and
Igor Gonopolskiy*

Observational equivalences for Linear Logic CC languages

Rémy Haemmerlé

Splitting and Updating Hybrid Knowledge Bases

Martin Slota, Joao Leite and Terrance Swift

Actual causation in CP-logic

Joost Vennekens

Application Papers and Systems and Tools Papers

Automatic Network Reconstruction using ASP

*Max Ostrowski, Torsten Schaub, Markus Durzinsky, Wolfgang Marwan and
Annegret Wagler*

Optimal Placement of Valves in a Water Distribution Network with CLP(FD)

*Massimiliano Cattafi, Marco Gavanelli, Maddalena Nonato, Stefano Alvisi and
Marco Franchini*

Constraint-Based Deadlock Checking of High-Level Specifications

Michael Leuschel and Stefan Hallerstede

ALPprolog — A New Logic Programming Method for Dynamic Domains

Conrad Drescher and Michael Thielscher

In conclusion, we would like to thank the members of the Program Committee and the external referees for their enthusiasm, hard work, and promptness, despite the higher load of the two rounds of refereeing plus the copy editing phase. The PC members were: Slim Abdennadher, Marcello Balduccini, Chitta Baral, Maurice Bruynooghe, Manuel Carro, James Cheney, Henning Christiansen, Alessandro Dal Palù, Marc Denecker, Agostino Dovier, Esra Erdem, François Fages, John Gallagher, Martin Gebser, Michael Gelfond, Samir Genaim, Katsumi Inoue, Andy King, Evelina Lamma, Joohyung Lee, Nicola Leone, Michael Leuschel, Yuliya Lierler, Vladimir Lifschitz, Marco Maratea, Victor Marek, Davide Martinenghi, Alessandra Mileo, Emilia Oikarinen, Mauricio Osorio, Maurizio Proietti, German Puebla, Konstantinos Sagonas, Vítor Santos Costa, Tom Schrijvers, Alexander Serebrenik, Guillermo Simari, Zoltan Somogyi, Tran Cao Son, Hans Tompits, Francesca Toni, Mirek Truszczyński, Germán Vidal, Kewen Wang, Jan Wielemaker, Stefan Woltran and Jia-Huai You. We would also like to thank Georg Gottlob, Adam Lally, and Günter Kniesel for their invited talks, Michael A. Covington and Francesca Toni for their tutorials, the ICLP organizers Mirek Truszczyński and Victor Marek (General Chairs), Joohyung Lee (Workshops), Yuliya Lierler (Publicity), Alessandro Dal Palù and Stefan Woltran (Doctoral Consortium) and Tom Schrijvers (Prolog Programming Contest), and Lexmark, University of Kentucky, and Association for Logic Programming for supporting the conference.

Finally, we would like to express our thanks and great appreciation to Ilkka Niemelä, editor in chief of Theory and Practice of Logic Programming, David Tranah from Cambridge University Press, Marc Herbstritt from LIPIcs, Leibniz Center for Informatics, and all the members of the ALP Executive Committee for their continued support for this initiative, which provides a new model of computer science publishing that is already being adopted by other computing research communities.

John Gallagher and Michael Gelfond

Program Committee Chairs and Guest Editors
