Simultaneous Representation of Interval Graphs in the Sunflower Case <i>Ignaz Rutter and Peter Stumpf</i>	90:1–90:15
Relaxed Models for Adversarial Streaming: The Bounded Interruptions Model and the Advice Model <i>Menachem Sadigurschi, Moshe Shechner, and Uri Stemmer</i>	91:1–91:14
Maximal k -Edge-Connected Subgraphs in Almost-Linear Time for Small k <i>Thatchaphol Saranurak and Wuwei Yuan</i>	92:1–92:9
Approximating Connected Maximum Cuts via Local Search <i>Baruch Schieber and Soroush Vahidi</i>	93:1–93:17
Parameterized Matroid-Constrained Maximum Coverage <i>François Sellier</i>	94:1–94:16
Fault Tolerance in Euclidean Committee Selection <i>Chinmay Sonar, Subhash Suri, and Jie Xue</i>	95:1–95:14
Aggregating over Dominated Points by Sorting, Scanning, Zip and Flat Maps <i>Jacek Sroka and Jerzy Tyszkiewicz</i>	96:1–96:13

Improved Algorithms for Online Rent Minimization Problem Under Unit-Size Jobs <i>Enze Sun, Zonghan Yang, and Yuhao Zhang</i>	97:1–97:14
Simple Deterministic Approximation for Submodular Multiple Knapsack Problem <i>Xiaoming Sun, Jialin Zhang, and Zhijie Zhang</i>	98:1–98:15
The Tight Spanning Ratio of the Rectangle Delaunay Triangulation <i>André van Renssen, Yuan Sha, Yucheng Sun, and Sampson Wong</i>	99:1–99:15
Canonization of a Random Graph by Two Matrix-Vector Multiplications <i>Oleg Verbitsky and Maksim Zhukovskii</i>	100:1–100:13
Improved Algorithms for Distance Selection and Related Problems <i>Haitao Wang and Yiming Zhao</i>	101:1–101:14
Maximum Coverage in Random-Arrival Streams <i>Rowan Warneke, Farhana Choudhury, and Anthony Wirth</i>	102:1–102:15
Efficient Block Approximate Matrix Multiplication <i>Chuhan Yang and Christopher Musco</i>	103:1–103:15
A Simple Boosting Framework for Transshipment <i>Goran Zuzic</i>	104:1–104:14

Preface

This volume contains the extended abstracts selected for presentation at ESA 2023, the 31st European Symposium on Algorithms. The event was organized by Centrum Wiskunde & Informatica (CWI), Amsterdam, the Netherlands, as a part of ALGO 2023, on September 4–6, 2023.

The scope of ESA includes original, high-quality, theoretical and applied research on algorithms and data structures. Since 2002, it has had two tracks: the Design and Analysis Track (Track A), intended for papers on the design and mathematical analysis of algorithms, and the Engineering and Applications Track (Track B), for submissions that also address real-world applications, engineering, and experimental analysis of algorithms. In 2022, a new track – Track S – was added, inviting contributions that *simplify* algorithmic results. We find that simpler algorithms are easier to implement, bridging the gap between theory and practice, and we find that new simple or elegant proofs are easier to understand and to teach, and may contain interesting new insights whose relevance only the future will reveal.

In response to the call for papers for ESA 2023, 370 papers were submitted, 267 for Track A, 61 for Track B, and 42 for Track S. Paper selection was based on originality, technical quality, exposition quality, and relevance. Each paper received at least three reviews. The program committees selected 103 papers for inclusion in the program: 79 from Track A, 15 from Track B, and 9 for Track S, yielding an overall acceptance rate of about 28%. The presentations of the accepted papers, together with two invited talks by Martin Dietzfelbinger (TU Ilmenau) and Rotem Oshman (Tel Aviv University) promise to make up an exciting program.

The European Association for Theoretical Computer Science (EATCS) sponsored best paper and best student paper awards. A submission was eligible for the best student paper award if all authors were doctoral, master, or bachelor students at the time of submission. For Track A, the best paper award was given to Ursula Hebert-Johnson, Daniel Lokshtanov and Eric Vigoda for the paper “Counting and Sampling Labeled Chordal Graphs in Polynomial Time”. For Track B, the best paper award was given to Xiangyun Ding, Xiaojun Dong, Yan Gu, Youzhe Liu and Yihan Sun for the paper “Efficient Parallel Output-Sensitive Edit Distance”. The best paper award for Track S was given to Oleg Verbitsky and Maksim Zhukovskii for the paper “Canonization of a Random Graph by Two Matrix-Vector Multiplications”. The best student paper award was given to Joakim Blikstad and Peter Kiss for the paper “Incremental $(1-\epsilon)$ -Approximate Dynamic Matching in $O(\text{poly}(1/\epsilon))$ Update Time”.

We wish to thank all the authors who submitted papers for consideration, the invited speakers, the members of the program committees for their hard work, and the over 500 external reviewers who assisted the program committees in the evaluation process. Special thanks go to the organizing committee, who helped us with the organization of the conference.
