LIPICs – Leibniz International Proceedings in Informatics

LIPICs is a series of high-quality conference proceedings across all fields in informatics. LIPICs volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

Editorial Board

- Christel Baier (TU Dresden, DE)
- Roberto Di Cosmo (Inria and Université Paris Cité, FR)
- Faith Ellen (University of Toronto, CA)
- Javier Esparza (TU München, DE)
- Holger Hermanns (Universität des Saarlandes, Saarbrücken, DE and Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Wadern, DE)
- Daniel Král' (Leipzig University, DE and Max Planck Institute for Mathematics in the Sciences, Leipzig, DE – Chair)
- Sławomir Lasota (University of Warsaw, PL)
- Meena Mahajan (Institute of Mathematical Sciences, Chennai, IN)
- Chih-Hao Luke Ong (Nanyang Technological University, SG)
- Eva Rotenberg (IT University of Copenhagen, DK)
- Pierre Senellart (ENS, Université PSL, Paris, France)
- Alexandra Silva (Cornell University, Ithaca, US)

A Combinatorial Framework for the Pons–Batle Identity: Young Tableaux, Lattice Paths, and Limit Laws <i>Heruan Liu, Michael Wallner, and Guan-Ru Yu</i>	13:1–13:20
The Cost of Cyclic Permutations and Remainder Sums in the Euclidean Algorithm <i>Valentin Blomer and Kai-Uwe Bux</i>	14:1–14:17
Cycle Structure of Random Standardized Permutations <i>Aurélien Guerber</i>	15:1–15:16
On Cycles in Multiset Permutations, Parking Functions, and Related Structures <i>Calum Buchanan, Fabian Burghart, Stephan Wagner, and Mei Yin</i>	16:1–16:17
Singularly Perturbed Discrete Differential Equations and Pattern Counts in Simple Triangulations <i>Michael Drmota and Eva-Maria Hainzl</i>	17:1–17:14
Large Deviation Principles for Pattern-Avoiding Permutations, and Limit Shapes for Constrained Mallows Permutations <i>Thomas Budzinski, Victor Dubach, Valentin Féray, Mohamed Slim Kammoun, and Mylene Maïda</i>	18:1–18:16
Fringe Subtrees of Split Trees <i>Cecilia Holmgren, Jasper Ischebeck, and Svante Janson</i>	19:1–19:17
Formulas and Asymptotics of Hypergraph Catalan Numbers <i>Eva-Maria Hainzl</i>	20:1–20:15
A New Fine-Scale Berry–Esseen-Type Gumbel-Limit Theorem for Multivariate Maxima <i>James Allen Fill</i>	21:1–21:20
A Distributional Analysis of QuickXsort for Mergesort <i>Jasper Ischebeck, Florian Lesny, and Ralph Neininger</i>	22:1–22:14
Moment Statistics in the Boltzmann Probability Model <i>Markus E. Nebel</i>	23:1–23:15
Fractional vs. Expectation Thresholds: Random Support Case <i>Thomas Fischer and Yury Person</i>	24:1–24:10
The Dispersion Process Has the Same Phase Transition on Almost Every Graph <i>Julius Hallmann, Kostas Lakis, and Tamás Makai</i>	25:1–25:11
Graphical Balanced Allocations with Removals <i>Sam Olesker-Taylor, Thomas Sauerwald, and Luca Zanetti</i>	26:1–26:16
Asymptotics of Parking Search in Hyperfractal Networks <i>Geoffrey Deperle, Christine Fricker, Philippe Jacquet, Bernard Mans, and Alessia Rigonat</i>	27:1–27:16
Bounded Linear Probing Hashing <i>Ahmed Alharbi, Cyril Banderier, and Charles Bouillaguet</i>	28:1–28:17
Enumeration of Bipartite Acyclic Digraphs <i>Guan-Huei Duh, Philipp Sprüssel, and Stephan Wagner</i>	29:1–29:18

Asymptotic Analysis of Generating Functions Arising from Dynamic Graphs <i>Nadja Azzouz, Olivier Bodini, Francis Durand, and Bernhard Gittenberger</i>	30:1–30:16
Lee–Yang Phenomena in Edge-Coloured Graph Counting <i>Maximilian Wiesmann</i>	31:1–31:17

■ Preface

The 37th International Conference/Meeting on Probabilistic, Combinatorial and Asymptotic Methods for the Analysis of Algorithms (AofA 2026) was held at the Ludwig-Maximilians-Universität München, Germany, during June 22–26, 2026.

Analysis of Algorithms (AofA) is a field at the boundary of computer science and mathematics, in particular probability theory and analytic and enumerative combinatorics. The goal is to obtain a precise understanding of the asymptotic and probabilistic characteristics – for example the amount of time, storage, or other resources needed – of algorithms and data structures. A unifying theme is the use of probabilistic, combinatorial, and analytic methods. The objects to be studied include random branching processes, graphs, permutations, trees, and strings. See also the AofA community website

<https://www.math.aau.at/AofA/>

for more and up-to-date information on the community and prior events. The call for papers invited papers in

- analytic algorithmics and combinatorics,
- probabilistic analysis of algorithms and
- randomized algorithms.

We also welcomed papers addressing problems such as: combinatorial algorithms, string searching and pattern matching, sublinear algorithms on massive data sets, network algorithms, graph algorithms, caching and memory hierarchies, indexing, data mining, data compression, coding and information theory, and computational finance. Papers addressing bridges to research in related fields such as statistical physics, computational biology, computational geometry, and simulation were also welcome.

The conference program featured the 2026 Philippe Flajolet Lecture by Hsien-Kuei Hwang, 30 contributed papers, which are collected in this volume, as well as six invited lectures by Éric Fusy (Laboratoire d'Informatique Gaspard Monge), Matthew Kwan (Institute of Science and Technology Austria), Irène Marcovici (Université de Rouen Normandie), Michal Opler (Czech Technical University in Prague), Will Perkins (Georgia Tech), and Bruno Salvy (ENS Lyon). A typical convention in the field is to list authors in alphabetical order. The order of the contributed papers in these proceedings reflects the chronological order of presentation at the conference.

Flajolet Lecture

The *Philippe Flajolet Lecture Prize* for outstanding contributions to analytic combinatorics and analysis of algorithms is awarded every two years by the Analysis of Algorithms community. At the AofA 2026 conference, Hsien-Kuei Hwang presented the seventh Flajolet Lecture, entitled *Laplace, Cauchy and Early Analytic Combinatorics*. The first paper in this volume is dedicated to his talk. The abstract reads as follows:

In the talk we will trace early historical developments of analytic combinatorics through a single object: the finite difference $\Delta^k 0^n$ (the ordered Stirling numbers). We examine how Laplace transformed this discrete quantity into real integral representations to derive saddle-point approximations, establishing an early encoding–integration–approximation pipeline. Cauchy's 1815 memoir then moved the same problem toward

37th International Conference on Probabilistic, Combinatorial and Asymptotic Methods for the Analysis of Algorithms (AofA 2026).

complex-analytic territory. Through this narrative we illustrate a pivotal transition: from an eighteenth-century algebra of formal identities to a nineteenth-century discipline of ε - δ inequalities.

Previous Flajolet Lectures Prize recipients are Donald E. Knuth, Robert Sedgewick, Luc Devroye, Wojciech Szpankowski, Svante Janson and Michael Drmota.

The prize is named in honor and recognition of the extraordinary accomplishments of the late Philippe Flajolet and his formative influence on the growth and flourishing of the AofA community. Philippe spent most of his scientific life at INRIA, France. He is best known for fundamental advances in mathematical methods for the analysis of algorithms. His research laid the foundation of a subfield of mathematics now known as analytic combinatorics. Analytic combinatorics is a modern basis for the quantitative study of combinatorial structures (such as words, trees, mappings, and graphs), with applications to probabilistic study of algorithms that are based on these structures. It also strongly influences research in other scientific domains, such as statistical physics, computational biology, and information theory. Flajolet's work takes the field forward by introducing original approaches in combinatorics based on two types of methods: symbolic and analytic. The symbolic side is based on the automation of decision procedures in combinatorial enumeration to derive characterizations of generating functions. The analytic side treats those functions as functions in the complex plane and leads to precise characterization of limit distributions. Beyond these foundational contributions, Philippe's research opened new avenues in various domains of applied computer science, including streaming algorithms, communication protocols, database access methods, data mining, symbolic manipulation, text-processing algorithms, and random generation.

Konstantinos Panagiotou,
on behalf of the Program and Steering Committees

AofA 2026 Program Committee

- Konstantinos Panagiotou (chair), Ludwig-Maximilians-Universität München, Germany
- Frédérique Bassino, Université Sorbonne Paris Nord, France
- Alessandra Caraceni, Scuola Normale Superiore, Pisa, Italy
- Michael Drmota, TU Vienna, Austria
- Valentin Féray, Université de Lorraine, France
- Noela Müller, TU/e Eindhoven, Netherlands
- Markus Nebel, Bielefeld University, Germany
- Robin Pemantle, University of Pennsylvania, USA
- Dimbinaina Ralaivaosaona, SU Stellenbosch, South Africa
- Juanjo Rué, UPC Barcelona, Spain
- Gilles Schaeffer, École Polytechnique, France
- Fiona Skerman, Uppsala University, Sweden
- Stephan Wagner, TU Graz, Austria
- Minmin Wang, University of Sussex, UK

AofA Steering Committee (as of 2026)

- Frédérique Bassino (chair), Université Sorbonne Paris Nord, France
- Clemens Heuberger, Alpen-Adria-Universität Klagenfurt, Austria
- Cecilia Holmgren, Uppsala Universitet, Sweden
- Cécile Mailler, University of Bath, UK
- Stephen Melczer, University of Waterloo, Canada
- Mark Daniel Ward, Purdue University, IN, USA
