The Propositional Satisfiability Problem – Algorithms and Lower Bounds

Dagstuhl Seminar 03141 – March 30 to April 04, 2003
Dagstuhl-Seminar-Report No. 374

SCHLOSS DAGSTUHL

INTERNATIONALES
BEGEGNUNGS-
UND FORSCHUNGSZENTRUM
FÜR INFORMATIK

ISSN 0940-1121

Herausgegeben von IBFI gem. GmbH, Schloss Dagstuhl, 66687 Wadern, Germany.

Das Internationale Begegnungs- und Forschungszentrum für Informatik (IBFI) Schloss Dagstuhl ist eine gemeinnützige GmbH. Sie veranstaltet regelmäßig wissenschaftliche Seminare, welche nach Antrag der Tagungsleiter und Begutachtung durch das wissenschaftliche Direktorium mit persönlich eingeladenen Gästen durchgeführt werden.

Gesellschafter:

- Gesellschaft für Informatik e.V. – Bonn
- TH Darmstadt
- Universität Frankfurt
- Universität Kaiserslautern
- Universität Karlsruhe
- Universität Stuttgart
- Universität Trier
- Universität des Saarlandes

Summary

The propositional satisfiability problem is the basic problem for which efficient algorithms in the classical sense do not exist. However, theoretical and applied computer scientists are clearly interested in this problem. On the applied side the satisfiability problem is seen as a paradigmatic combinatorial search problem. It is a special type of constraint satisfaction problem. And constraint satisfaction problems allow for a natural modeling of real life search problems. On the theoretical side two complementary aspects of the satisfiability problem are the focus of recent research: First, developing algorithms with provable performance guarantees, and second, proving lower bounds of any kind. Recently scientific progress has been made in each of the aforementioned areas.

Due to the diversity of the techniques employed the corresponding scientific groups tend to be in part disjoint. It is the obvious purpose of the seminar to bring these groups together.

The seminar fulfilled its purpose in any respect. Most of the about 20 talks dealt directly with algorithmic aspects of the problem, most interestingly some experimental and theoretical analyses of local search algorithms were presented. Three talks from the applied area are also worth mentioning. In two of them satisfiability instances arising from cryptographic applications were presented and one dealt with satisfiability instances arising from the area of configuration (of cars). These talks were particularly interesting to algorithm designers because they made them familiar with complex instances from real life. Experience will show, if this has served as a starting point of a fruitful collaboration.

The understanding of random propositional formulas in conjunctive normal form is still one of the major open problem areas. The relevant "satisfiability threshold conjecture" is based on an experimentally clearly visible phenomenon, but is still only to a small part proven by now. The conjecture asserts that formulas with approximately $4.2n$ many randomly chosen 3-clauses become suddenly unsatisfiable.

A couple of open problems were discussed by the participants during an open problem session. These are contained in the proceedings.

Participants

- Alekhnovich, Michael (MIT – Cambridge)
- Atserias, Albert (UPC – Barcelona)
- Dantchev, Stefan (University of Leicester)
- Dantsin, Evgeny (Roosevelt University – Chicago)
- Daude, Hervé (LATP CMI – Marseille)
- Esteban, Juan Luis (UPC – Barcelona)
- Franco, John (University of Cincinnati)
- Galesi, Nicola (Università di Roma "La Sapienza")
- Goerdts, Andreas (TU Chemnitz)
- Hirsch, Edward A. (Steklov Inst. – St. Petersburg)
- Hofmeister, Thomas (Universität Dortmund)
- Iwama, Kazuo (Kyoto University)
- Jerabek, Emil (Academy of Sciences – Prague)
- Johannsen, Jan (LMU München)
- Kaporis, Alexis (CTI & University of Patras)
- Kirousis, Lefteris M. (CTI & University of Patras)
- Köbler, Johannes (HU Berlin)
- Krause, Matthias (Universität Mannheim)
- Küchlin, Wolfgang (Universität Tübingen)
- Kullmann, Oliver (Swansea University)
- Lindner, Wolfgang (Universität Ulm)
- Maciel, Alexis (Clarkson University – Potsdam)
- Messner, Jochen (Universität Ulm)
- Monasson, Remi (CNRS – Paris)
- Mundhenk, Martin (Universität Jena)
- Paturi, Ramamohan (University of California – San Diego)
- Porschen, Stefan (Universität Köln)
- Pudlák, Pavel (Czech Academy of Sciences)
- Riis, Sören (Queen Mary University of London)
- Rossmanith, Peter (RWTH Aachen)
- Schöning, Uwe (Universität Ulm)
- Schuler, Rainer (Universität Ulm)

- Sinz, Carsten (Universität Tübingen)
- Speckenmeyer, Ewald (Universität Köln)
- Toran, Jacobo (Universität Ulm)
- Turlakis, Iannis (Princeton University)
- Van Maaren, Hans (TU Delft)
- Viglas, Anastasios (University of Toronto)
- Walsh, Toby (Univ. of New South Wales – Sydney)
- Watanabe, Osamu (Tokyo Institute of Technology)
- Zhang, Huaitao (Queen Mary University of London)
